## System Manual

### Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

### Disclaimer

Signals generated by the system are not investment recommendations. All materials included on the website, as well as all system components (indicators, instruction manual) are for educational purposes only. Creators of the system will not take any responsibility for any profit or loss/damage caused by using the system.

- Restart your MT4

- Open your favourite chart. Press the right mouse button and pick  
ARRAY template.

# System overview

System contains two major sections

- 1.Entry/Exit Indicator.
- 2.Info Dashboards

# HOW DOES IT WORK.

System signals are very easy to spot.

The indicator counts from 1 to 9. If the count will reach 9, the signal is confirmed.

## RED ARROW – SELL SIGNAL

## GREEN ARROW – BUY SIGNAL

## Handful of advice

**Please note that the reversals works better on standard volatility and 'quiet' market. If the price is moving hard in one direction (usually after some news) please be carefull with trading against such trend.**

- Software can be used as sand alone or additional confirmation tool
- Before trading, always make sure that the market does not expect any important data. If something 'big' appears in the news calendar, it's better to wait for their announcement and later join to further movement.
- Do not overtrade. Try to Focus on quality trades (the more trades opened at the same time, the harder is to control the risk).

## STOP LOSS

Stop loss order should be placed in the technically best place:

- the last swing high (for the SELL trade)
- last swing low (for the BUY trade)
- at the round number
- close to important support/resistance area.

## TAKE PROFIT

- risk to reward ratios (for example: if your stop loss = 15pips, set your TP at 15 or 30 pips – depending on the market volatility).
